No. $\frac{S.\ B.}{244}$ of 1897.

From

THE SURGEON-GENERAL WITH THE
GOVERNMENT OF BOMBAY;

To

THE CHIEF SECRETARY TO GOVERNMENT,
General Department,
Bombay.

Office of the Surgeon-General
with the Government of Bombay:
Bombay, 13th May 1897.

SIR,

I have the honour to forward, for the information of Government, the Annual Administration and Progress Report of the Lunatic Asylums in the Bombay Presidency for the year 1896.

2. The Public Works Department have carried out the usual repairs during the year.

3. *At Colába* the total cost of repairs to the buildings amounted to Rs. 2,811-1-5 against Rs. 4,847-10-4 in the previous year. No new works have been done or asked for during the year under report.

4. The plans and estimates for improving the defects in the Lunatic Asylum at Ratnágiri, *viz.*, for heightening a compound wall between the male and female portions of the asylum, for enlarging the cook-room and for making additional cells, which were submitted to Government, as mentioned in my last year's report, have not yet been sanctioned.

5. *At Poona* the only change that has been made as regards the building is the erection and completion of a day-shed for the male lunatics. The drainage of the yards has been improved to prevent water lodging in them.

6. *At Dhárwár* quarters for the warders and servants were completed during the year under review; latrine accommodation has still to be provided. The alterations to the female yard and the building of a verandah and a wall to isolate the present female day-room so as to include it in the portion of the asylum used for the male lunatics, have also been completed. Three of the single cells now open into the female airing ground instead of the male side of the asylum as formerly.

7. *At Ahmedabad* the two day-sheds sanctioned in the year 1895 were completed during the year under report. The fixed presses in the store-room were also provided out of my discretionary grant. The extension of the verandahs and the provision of separate accommodation for criminal lunatics have been postponed until such time as funds are available.

8. *At Hyderabad* there has been no change in the buildings during the year under review, except that a Bijápur cooking range was erected at a cost of about Rs. 160, which was paid out of the discretionary grant at my disposal. This has caused a saving in the consumption of fuel by 4 ounces per head per day, or about 2 annas per diem in cost. The Superintendent of the asylum urges the necessity of raising the outer walls of the asylum, as at present they are so low and out of repair that they offer no obstruction to the escape of lunatics.

9. The water-supply was good and ample. At Colába the auxiliary tank was almost always full and met the requirements of the institution. The full

allowance of water promised by the Ratnágiri Municipality to the lunatic asylum at Ratnágiri as per Government Resolution No. 156 C.W —623 of 1889, has not yet been given, owing to some defect in the laying on of the pipes from the source.

10. The undermentioned works were executed at the lunatic asylums and paid for out of the discretionary grant at my disposal during the year 1896 :—

	Rs.
Paving the dispensary in the Lunatic Asylum at Dhárwár ...	45
Constructing a temporary isolation hut for small-pox patients at the Lunatic Asylum at Ahmedabad	31
Fixing presses in store-room for storing clothing at the Lunatic Asylum at Ahmedabad	100
Providing Bijápur cooking range at the Lunatic Asylum at Hyderabad	160
Providing ironbars to the windows in place of wooden-bars, in female and male day wards at the Lunatic Asylum, Dhárwár ...	200
Total ...	536

11. On the statistical statements appended at the end of the report, I beg to make the following remarks :—

Statement No. I shows that the total population of the asylums during the year 1896 was 1,006, or 28 more than in the previous year. Of these, 817 were males and 189 females, as compared with 804 males and 174 females in 1895. On 1st January 1896 there remained 578 males and 136 females, 227 males and 49 females were admitted and 12 males and 4 females re-admitted; 59 males and 13 females were discharged cured, 100 males and 13 females transferred to the care of friends (83 males and 10 females improved and 17 males and 3 females not improved), and 7 males discharged otherwise (1 escaped, 1 transferred from the criminal to the civil list and 1 from the civil to the criminal list, 2 handed over to the care of their relations by order of the Magistrate and 2 detained under Section 31 of Act V of 1871 as amended by Section 25 of Act X of 1886). 59 males and 19 females died, as compared with 58 males and 10 females in the preceding year, leaving at the end of the year under review 592 males and 144 females —total 736, against 714 (578 males and 136 females) in 1895. The daily average strength was 583·2 males and 140·2 females —total 723·4, as compared with 717·6 (581·5 males and 136·1 females) in the previous year.

The percentages of cures and deaths to the daily average strength were :—

Cured ...	Males	10·1	Total ...	9·9
	Females	9·2		
Died ...	Males	10·1	Total ...	10·7
	Females	13·5		

The percentages to admissions were :—

Cured ...	Males	24·6	Total ...	24·6
	Females	24·5		
Died ...	Males	24·6	Total ...	26·7
	Females	35·8		

Statement No. II is a return of criminal lunatics. On the 1st January 1896 there remained 97 males and 10 females, 22 males were admitted and 1 male was re-admitted, giving a total of 130 (males 120 and females 10) in all confined, or 4 males more than in 1895. Of these, 13 males were discharged, transferred, &c., 11 males and 1 female died, and 96 males and 9 females remained at the end of the year. The daily average strength of this class of insanes was 92·0 males and 9·2 females—total 101·2, against 105·0 (males 95·0 and females 10·0) in the preceding year.

Particulars of the different kinds of these insanes are given in the following table as ordered by the Government of India:—

Kind of criminal lunatics.	Colába.	Ratnágiri.	Poona.	Dhárwár.	Ahmedabad.	Hyderabad (Sir Cowasji Jehángir).	Total.
Those tried and acquitted on the ground of insanity	10	7	...	...	4	4	25
Those insane on admission and found to be incapable of making a defence.	34	18	3	4	10	10	79
Those who became insane during imprisonment	7	1	5	8	4	1	26
Total ...	51	26	8	12	18	15	130

Statement No. III is a return showing the religion, sex and residence of the insanes admitted during the year under report. Of the 292 admissions and re-admissions, 64 were Christians (46 Europeans, 4 Eurasians and 14 Native Christians), 139 Hindus, 69 Mahomedans and 20 of other castes. Of the 36 European military insanes, 27 were from Bombay, 7 from the Punjáb and 2 from Bengal. Of the 9 civilian admissions, 7 came from Bombay and 2 from the Punjáb. The remaining one European was a sailor brought from the Bombay Harbour.

Statement No. IV shows the previous occupation of the patients admitted during the year 1396. Beggars and mendicants form the majority, *viz.* 61, cultivators numbered 44, soldiers 32 and traders and merchants 23. In 20 cases the occupation was not ascertained, and 29 had no occupation.

Statement No. V gives the ages of the insanes admitted according to sex. Under 20 there were 12 insanes (10 males and 2 females), between 20 and 40 there were 225 (187 males and 38 females), between 40 and 60 years of age there were 50 (40 males and 10 females), and above 60 years 5 (2 males and 3 females).

Statement No. VI showing the various types of insanity is revised in accordance with the orders of the Government of India contained in their Home Department, Medical, No. 16—Medical—576—86, dated 10th July 1896, embodied in the Bombay Government Resolution No. 3782, dated 26th August 1896, General Department. The following table gives the number remaining, admitted, recovered, improved and died in each form of insanity:—

	Remaining.	Admitted.	Total.	Recovered.	Improved.	Died.
Mania	373	151	524	42	57	32
Melancholia	105	59	164	9	19	18
Dementia, including acquired imbecility	161	55	216	7	15	18
Idiocy	33	4	37	1	...	2
Epileptic insanity	20	9	29	1	1	8
Consecutive insanity from fevers, visceral inflammation, &c. ...	5	...	5	...	...	...
Other forms of insanity ...	11	11	22	3	1	...
Declared to have recovered or not yet diagnosed	6	3	9	9	...	...
Total ...	714	292	1,006	72	93	78

Statement No. VII gives the alleged causes of insanity among the lunatics In connection with this statement I beg to add that the whole of the columns under the head of "Moral causes" have been abolished and all such cases included under one general heading, namely, "Moral causes," as ordered by the Government of India in their above-quoted letter.

Of the 1,006 cases, a cause is given in 475 and is unknown in 531. Physical causes numbered 387 and moral 88. Among the former, the use of intoxicating drugs and abuse of spirits are credited with 155 cases, previous attacks accounted for 56, epilepsy 37, hereditary causes 31, fever 28, congenital disease 18, injury to head and masturbation 12 each, destitution 10, child-birth 7, sexual excess 6, sunstroke 5, syphilis and climate 4 each, and uterine disorder and paralysis 1 each. Among the criminal insanes charged with crimes of violence, the following are the alleged causes of insanity :—

Gánja smoking... ...	12	Hereditary	3
Spirit drinking... ...	2	Grief	3
Fever	3	Religion	1
Puerperal fever ...	1	Anger	1
Epilepsy	10	Anxiety	1
Injury to head	1		

In 43 such cases the cause is not known.

Statement No. VIII is a return of the sick in the asylum hospitals (for diseases other than insanity), with the results. At the beginning of the year there remained 42 patients under treatment and 509 were admitted during the year, making a total of 551 against 409 in the previous year. Of these, 424 were cured, 10 discharged otherwise (6 transferred to the care of friends, 2 relieved, 1 escaped and in one case the disease was changed) and 78 died, leaving 39 on the sick roll on 31st December 1896. The daily average sick was 47·2 (males 34·7 and females 12·5) as compared with 44·8 (males 33·8 and females 11·0) in 1895. The chief causes of admissions were ague, debility, dysentery, epilepsy, diarrhœa, anæmia, bronchitis, pneumonia, chronic pneumonic phthisis and Bright's disease. Of the 78 deaths, 20 were due to dysentery, 9 to chronic pneumonic phthisis, 8 to epilepsy, 5 each to pneumonia and Bright's disease, 4 each to debility and anæmia, 3 each to old age and diarrhœa, 2 each to remittent fever, paralysis and valvular disease of the heart and 1 each to enteric fever, pyæmia, tubercle of lungs, dropsy, apoplexy, hemiplegia, tetanus, general paralysis combined with old age, fatty degeneration of heart, bronchitis and burns and scalds.

The following table gives the ratio of deaths per mille of the average daily strength and the total population of each of the asylums as compared with that of the preceding year :—

		Average Daily Strength.	Total Population.	Number of deaths.	Ratio of deaths per mille to Average Daily Strength.	Ratio of deaths per mille to Total Population.
Colába...	1896...	274·8	432	51	185·6	118·1
	1895...	283·0	417	35	123·7	83·9
Ratnágiri	1896...	94·9	111	4	42·1	36·0
	1895...	98·4	108	3	30·5	27·8
Poona	1896 ..	94·0	145	9	95·7	62·1
	1895...	85·5	140	18	210·5	128·6
Dhárwár	1896...	49·4	56	4	81·0	71·4
	1895...	46·0	54	2	43·5	37·0
Ahmedabad	1896...	103·8	117	5	48·2	42·7
	1895...	105·7	119	3	28·4	25·2
Hyderabad (Sir Cowasji Jehángir).	1896...	106·5	145	5	46·9	34·5
	1895..	99·0	140	7	70·7	50·0
Total ...	1896...	723·4	1,006	78	107·8	77·5
	1895...	717·6	978	68	94·7	69·5

It will be seen from the above table that excepting Poona and Hyderabad, the death-rate was higher in all the asylums during the year under review. At Colába there were 51 deaths (3 Europeans and 48 natives), or 16 more than in the previcus year, making a death rate of 118·1 per mille of the total population as compared with 83·9 in 1895. Among the Europeans the number of deaths was 3, or the same as in the previous year, and the ratio of deaths per mille to the total population 41·1 as compared with 44·8 in 1895. The three European patients who died during the year were cases of chronic pneumonic phthisis, dysentery and enteric fever. The cases of phthisis and dysentery were long residents of the asylum and had been suffering for many years from chronic dementia. They were much enervated by the long confinement necessarily entailed, and they succumbed to the bodily ailments which subsequently supervened. The case of enteric fever was in a British soldier who was ailing from malarial fever prior to his admission into the asylum. Indications of typhoid fever were observed in his case soon after admission and unfavourable symptoms having rapidly set in, the case terminated fatally within 12 days. The mortality among the natives was at the rate of 133·7 per mille of the total population against 91·4 in 1895, being chiefly under dysentery, chronic pneumonic phthisis, epilepsy and Bright's disease. Thirteen of these cases were brought in by the Police and they were found on admission to be suffering from exhaustion by privations and ailing from an advanced stage of the diseases, chiefly from dysentery and chronic pneumonic phthisis. Others were more or less old residents of the asylum who had been suffering from anæmia and debility for some time; all such cases have succumbed to the prevailing diseases. The rains, which commenced exceptionally heavy in the beginning of the monsoon of the year under report, have also contributed to the cause for the increased sickness and mortality, and most of the cases attacked by dysentery then have proved fatal within a shorter period than in the ordinary times.

At Ratnágiri there were 4 deaths as compared with 3 in the preceding year, giving a ratio of 36·0 per mille of the total population against 27·8 in 1895. The causes of death were debility, hemiplegia, tubercle of lungs and anæmia. The case of debility was an old man, aged 61, who had been under treatment as an insane for 30 years, having been transferred from the Colába Lunatic Asylum in 1886. During his residence he had been thrice in hospital for fever and was last admitted for debility associated with fever on 17th November 1895, and being an old man, he succumbed on 9th January 1896. The female who died of hemiplegia had been bed-ridden for nearly five years. She was aged 55 and was dirty and uncontrollable. Diarrhœa supervened and she died on 16th May 1896. The case reported as having died of tubercle of lungs was a male aged 34, and a dirt-eater. He had been five times in hospital in his four years' residence in the asylum for fever and asthma and, pulmonary tuberculosis developing, he died on 12th June 1896. The health of the fourth case was good on admission on 21st May 1890, but frequent masturbation aggravated his mental condition, and anæmia developed. He refused to take any food, and diarrhœa developing, he died on 6th August 1896.

At Poona the number of deaths was considerably smaller, *viz.* 9, as compared with 18 of the previous year, giving a death-rate of 62·1 per mille of the total population against 128·6 in 1895. The mortality was due to anæmia 3 and remittent fever, old age, general paralysis, chronic bronchitis, diarrhœa and chronic albuminuria 1 each. The case of chronic bronchitis was that of a female who, when admitted into the asylum on 29th March 1894, was about six weeks pregnant and in a fair state of health. She continued in much the same condition until about six months after her confinement on the 14th November following, when she suffered from an attack of bronchitis which impaired her general health and left her liable to recurrent attacks of this disease. Though this patient was not actually placed on the sick list until 9th October 1895, she had occasionally been treated with expectorants and local applications to chest. On the latter date she was seized by a severe attack of bronchitis, having temperature 102·6°, which on the following day rose to 103·4°. It gradually fell to about 99·0 with occasional exascerbations, until death, which took place on 7th January 1896, it may be said that the temperature was never once normal. The one who died of remittent fever was, on admission

into the asylum on 29th October 1891 reported as in a fair state of health, though not of a robust constitution. During his residence he never suffered any complaint beyond slight ailments until 31st December 1895 when it was necessary to place him on the sick list for remittent fever, complicated with diarrhœa. From this date he continued in a weak and debilitated condition and was liable to recurrent attacks of fever which gradually impaired his constitution and he died from exhaustion on 8th April 1896. The case of old age was reported to be very weak and debilitated on admission into the asylum on 16th October 1895. During his residence he was liable to periodic attacks of great excitement and during these periods he refused food and was most quarrelsome. He had frequently had attacks of diarrhœa which resisted treatment and this impaired his general health and he died from exhaustion and old age on 22nd May 1896, nearly 21 days after he was transferred to the sick list. The patient suffering from paralysis was admitted into the asylum on 31st October 1895 and at the time was returned as in a fair state of health. He continued to be comparatively well until 21st June 1896, when he was suddenly seized with involuntary muscular movements and total inability to walk or assist himself in any way. From this date incontinence of urine was present and he gradually sank and died from exhaustion on 10th July 1896. The case of albuminuria was an old resident of the asylum. On admission on 23rd March 1869 he was reported to be in a fair state of health, though not physically strong. During his long residence he had never been on the sick list for any complaint until 14th April 1896, when symptoms of albuminuria appeared and he was placed on the sick list. From this date well marked signs of albuminuria steadily increased and he died from urenic poisoning on 12th August 1896. The patient who died of diarrhœa was admitted into the asylum on 21st November 1895 and returned as in an indifferent state of health. Throughout his residence in the asylum he was subject to frequent attacks of diarrhœa and inability to assimilate the ordinary asylum food, which necessitated his being placed on a special diet from the commencement. As little or no improvement took place in his general condition, he was permanently transferred to the sick list on 12th August 1896 and remained on it until death on 10th September 1896. The 3 cases of anæmia were reported to be in a weak and emaciated condition on admission into the asylum. One of these was placed on the sick list immediately on his admission into the asylum on 12th October 1896 and during his three days' residence he was unable to either walk, move about or feed himself, urine and fœces were passed involuntarily and he gradually sank and died on 15th October 1896.

The Dhárwár Asylum shows an increase of 2 deaths over the previous year, *viz.* 4 against 2, giving a ratio of 71·4 per mille of the total population as compared with 37·0 in 1895. The causes were dysentery, epilepsy, pneumonia and burns. The case of dysentery was that of a woman who had been under confinement since 1888 and had previously suffered from an attack of influenza with bronchial catarrh and cardiac weakness. The dysentery was accompanied with great prostration and proved intractable. The fatal case of epilepsy was that of a male, the subject of epileptic insanity. He had been in the asylum since May 1890, and his general health was much impaired by influenza and bronchitis in 1894. After two days of severe convulsions associated with a high temperature he died comatose. At the *post-mortem* examination blood was found effused on the surface of the brain and the cortical substance softened. The case reported as having died of pneumonia was that of a female who had been in the asylum for less than a year. She had suffered from severe epileptic fits and sank from exhaustion on the 17th day of her illness. The death from burns and scald was directly due to tetanus. The woman's clothing was set on fire by the bursting of a lamp in the sleeping barrack and she was severely and extensively injured in consequence. Tetanus set in shortly afterwards and proved fatal the next day.

At Ahmedabad there were 5 deaths, or 2 more than in the preceding year. The ratio of deaths per mille of the total population was 42·7 against 25·2 in 1895. Of the 5 deaths, 2 were from pneumonia and one each from debility, epilepsy and diarrhœa. Of the two cases of pneumonia, one was a man of 50 years of age and an inmate of this asylum for nearly 21 years. The other

was an extremely violent epileptic maniac who remained on the sick list from the previous year and was under treatment for repeatedly recurring fits of epilepsy combined with general ill-health. Pneumonia supervened and he died within 5 days. The patient suffering from debility was nearly 13 years in the asylum for melancholia. He persistently refused nourishment and died of exhaustion after being on the sick roll for one month. The case of epilepsy was that of an inmate of the asylum for nearly five years. He was subject, since his admission into the asylum, to violent fits of epilepsy and died on the 11th May 1896 during one of these fits. The last fatal case was that of an idiot, aged 45, who was an inmate of the asylum for nearly 21 years. He died from fever and diarrhœa one month and 10 days after his admission into the asylum hospital.

The Sir Cowasji Jehángir Lunatic Asylum at Hyderabad shows a decrease of 2 deaths over the previous year. The mortality was due to debility and pneumonia 2 each and diarrhœa 1. Most of these cases were in an extremely emaciated condition on their admission into the asylum. The ratio of deaths per mille to the total population was 34·5 as compared with 50·0 in 1895. The small death-rate was, in a great measure, owing to the past year having been an exceedingly healthy one generally. There were no inundations, and the rainfall was very scanty and the temperature, as a rule, much higher than that of the preceding year. The improvement may also be attributed to some extent to the fact that the inmates have been made to wear their clothing which they do now in most cases very willingly. This doubtless accounts for the small number of cases of pneumonia as compared with former years.

With reference to paragraph 10 of the Note by the Director-General of the Indian Medical Service on the reports of the lunatic asylums under local Governments and Administrations for the year 1895, forwarded with the Bombay Government Resolution No. 4470 dated 9th October 1896, General Department, I beg to state, for the information of Government, that the suggestion made regarding the issue of prophylactics in the unhealthy seasons was carried into effect in all the asylums of this Presidency. Malarial fevers of intermittent type are rife mostly during the monsoon and a few cases during the cold weather. Quinine and cinchona alkaloids are freely used during these seasons, and quinine and ferruginous preparations given usually to those who are debilitated and anæmic with advantage.

As regards paragraph 15 of the Note above referred to, I may add that no cases of injuries of a "major" kind were treated in the Colába, Ratnágiri, Poona and Hyderabad Asylums. At Dhárwár there was only one case of "major" injury (burns and scalds), which was due to an accident but not to laxity of supervision or want of vigilance on the part of any of the establishment. This case (that of a female) was caused by the sudden bursting of a lamp at night, which set fire to her clothing, and the greater part of her body was burnt, death resulting from tetanus on the second day.

Statement No. IX is the cash account of the asylums during the year under review. The total income amounted to Rs. 1,52,550-10-2. Of this Rs. 1,18,437-15-10 were received from the Treasury, Rs. 14,142-12-1 from paying patients, Rs. 2,697-14-6 from the Manufacturing Department, being the value at the market rates, less cost of raw materials, of articles supplied to the asylums and sold to the public and labour of insanes on trees, and Rs. 17,226-14-3 were book receipts on account of works done by the Public Works Department and supply of stationery, forms and Europe medicines; the corresponding figures for the preceding year being Rs. 1,09,208-7-6, Rs. 13,908-2-10, Rs. 2,372-5-8 and Rs. 10,650-7-6 respectively. Rs. 45-1-6 were got from miscellaneous sources against Rs. 60-10-6 in 1895.

The total expenditure amounted to Rs. 1,52,550-10-2 as compared with Rs. 1,36,135-15-1 in the previous year. The establishment cost Rs. 53,273-0-3 against Rs. 48,691-1-11 in 1895, the increase under Superintendence being due to the promotion of the Superintendent of the Colába Lunatic Asylum from the rank of Surgeon-Major to that of Surgeon-Lieutenant-Colonel and also to the payment of the salary and allowances of his substitute, Surgeon-Major J. P. Barry, for the period the former was on privilege leave. That under the head of "Establishment" can be ascribed partly to the payment of substitutes for the Senior Assistant Surgeon and the Matron of the Colába Lunatic Asylum during

the period they were granted leave, and partly to the payment of grain compensation to the menial servants of all the asylums. Rs. 50,983-6-11 were expended on diets, as compared with Rs. 47,914-3-4 in the preceding year. The increase under this head is attributable to the comparatively higher contract rates prevailing during the year and the increased number of patients. The cost on bedding and clothing was Rs. 5,380-14-0, or Rs. 66-15-10 more than in the previous year. There is an increase of Rs. 242-7-9 in the expenditure on medicines over the previous year, due to the charges on account of a portion of medical stores supplied to the Colába and Dhárwár Asylums during the year 1895 being paid during the year under review. Contingencies cost Rs. 9,812-12-9 as compared with Rs. 8,025-10-11 in 1895. The purchase of more books and periodicals and the higher water-rates charged from the beginning of the financial year based on the calculation of the last three years' actual consumption at the Colába Lunatic Asylum as well as the increased conservancy charges at the Poona Asylum account for the increase under this head.

If the amounts of Rs. 14,142-12-1 received from paying patients, Rs. 1,386-1-6 on account of the sale to the public of manufactured goods and abour of lunatics on trees, and Rs. 45-1-6, the sale-proceeds of unserviceable articles, &c., remitted into the Treasury, and Rs. 1,311-13-0 on account of manufactured goods made over to asylums for asylum purposes,—total Rs. 16,885-12-1,—be deducted from the amounts received from the Treasury and adjusted to Government as "Book Receipts," the net cost to Government was Rs. 1,18,779-2-0 and the net cost per head of daily average strength Rs. 164-3-2, against Rs. 1,03,581-14-11 and Rs. 144-5-6 in 1895, respectively.

The following is the abstract of cash account required by the Government of India as per their memorandum No. 9—Medl.—499, dated 25th July 1890, Home Department, Medical, embodied in the Bombay Government Resolution No. 3149 of 9th August 1890, General Department :—

	Daily average strength in 1896.	Establishment.		Diet.		Clothing and Bedding.

With reference to paragraph 7 of Government Resolution, General Department, No. 2714, dated the 2nd July 1894, I beg to solicit the attention of Government to the remarks made in my Annual Report on the Asylums of the Bombay Presidency for the year 1895, *re* the fluctuations in expenditure under different heads in the various asylums, and to state that the same remarks hold good for the year under review.

Statement No. X is a return of the sanctioned establishment as it stood on the 31st December 1895. The monthly cost was Rs. 4,145-8-0 as compared with Rs. 3,937-8-0 in 1895. The increase is due to the increased rate of pay to the Steward and to the Superintendent of the Lunatic Asylum at Colába on promotion from the rank of Surgeon-Major to Surgeon-Lieutenant-Colonel.

Statement No. XI shows the receipts and expenditure of the manufacturing department. The total credits amounted to Rs. 3,436-8-0 and debits to Rs. 2,212-11-11, showing a profit of Rs. 1,223-12-1, or Rs. 141-12-6 more than in the previous year. The average number of insanes employed during the year was 288·9 males and 62·1 females—total 351·0, as compared with 341·1 (males 276·1 and females 65·2) in 1895. In calculating the percentage of the lunatics employed, those employed as supplementary servants of the asylums, *i.e.*, for works other than on manufactures, have also been included in this statement, but the estimated value of their labour has not been taken into account.

With reference to paragraph 24 of the note by the Director General, Indian Medical Service, on the reports of the lunatic asylums, under Local Governments and Administrations, for the year 1895, I beg to invite the attention of Government to the remarks made at pages 7 and 8 of my Annual Administration and Progress Report on the Lunatic Asylums of this Presidency for the year 1894, and to state that at Colába lunatics who are willing to be engaged in some occupation are allowed to work in factories attached to the asylum as well as on extramural work, and that the European and Eurasian inmates have no suitable occupation in which they can be employed. In other asylums of this Presidency, gardening and cultivation are the chief occupations which those who are willing to work enjoy. Some are trained to make their sleeping mats, and the females are for the most part employed in grinding corn and other extramural works. Every effort is made to give some kind of healthy employment to the inmates, and as an inducement, some little extras are given to those who work well. They are also supplied with musical instruments, games, books, papers and periodicals, &c. Native musicians are occasionally engaged to amuse them on all the principal holidays, when extra diet and sweetmeats, &c., are supplied to them and displays of fire-works and illuminations are also made on the Diváli holidays. These amusements are much appreciated and conduce much to their health and comfort.

With regard to the concluding portion of the paragraph of the note above referred to, I beg to state that dairy farms might advantageously be established at some of the asylums if Government were prepared to undertake this venture, but it would require a considerable outlay, as plant and machinery of a good and modern description will be required. To put our asylums on a par with the asylums of other provinces, agricultural or horticultural operations might also be extended, if it were possible to acquire any good arable lands in the vicinity of the asylums.

Statement No. XII gives the condition of the insanes as to castes, sex and marriage and is summarized in the following tables:—

Statement No. XIII gives particulars regarding criminal lunatics. Of the average strength of 101·2 (males 92·0 and females 9·2), 46·1 males and 7·6 females, or a total of 53·7, were employed. 24 males and 2 females had been charged with theft, 34 males and 5 females for culpable homicide amounting to murder, 11 males and 1 female for culpable homicide not amounting to murder, 4 males with attempt to commit suicide, 14 males and 1 female for causing grievous hurt, 6 males with house-breaking, 11 males with mischief and assault, and 16 males and 1 female with miscellaneous offences, such as dacoity, mischief by fire, &c. &c.

12. With reference to para. 26 of the Note by the Director-General of the Indian Medical Service, above referred to, I beg to state that at Colába the Assistant Surgeon is almost entirely occupied under the orders of the Superintendent in carrying out his professional duties, the executive duties being distributed among the Overseers and the Steward. The Assistant Surgeon here has, however, to assist the Superintendent in the management and supervision of the establishment generally. In all other asylums the medical care and treatment of lunatics are in no way subordinated to executive duties but are looked after by the Hospital Assistants under the direction of the Superintendents. But in all of the asylums, except Colába, there is no clerk sanctioned, and on this account the medical subordinates must give a certain amount of time daily to clerical work. If a clerk was sanctioned for each asylum, then the whole of the subordinates' time would be available for medical duties; but this is a question of money, and hitherto the asylums have been very efficiently worked with the present staffs, though I agree with the Director-General in para. 26 of his remarks on the lunatic asylums for 1895, that the medical subordinates should only have medical duties to perform.

13. The official visitors were regular in their attendance at all the asylums.

14. The Principal Medical Officer, Sind District, Karáchi, inspected the Sir Cowasji Jehángir Lunatic Asylum, Hyderabad, and found everything in good order.

15. I inspected the Asylum at Ahmedabad on 16th November 1896 and was pleased with my inspections and at the efficient supervision of Surgeon-Lieutenant-Colonel Bartholomeusz. I formally inspected the Poona Asylum on 18th December 1896 and frequently during the year at informal visits. I have known this asylum for years and am very much pleased with the improvements that have been gradually made, and with the way in which it has been managed during the year under report.

I inspected the Colába Asylum on 4th March 1897 and was very pleased at the excellent way in which this asylum is managed by Surgeon-Lieutenant-Colonel Boyd. The buildings are old and not suited for an asylum, but they have always been kept scrupulously clean, and by judicious arrangements the defects in the building have been greatly obviated. The efficiency of this asylum reflects great credit on Surgeon-Lieutenant-Colonel Boyd and his subordinates. The new asylum will, it is hoped, be soon finished and ready for occupation.

16. In conclusion I beg to state that all the Superintendents have performed their duties most efficiently.

I have the honour to be,
Sir,
Your most obedient Servant,
H. COOK, M.D., Surgeon-Major-General,
Surgeon-General with the Government of Bombay.

ANNUAL STATEMENT No. 1.
